**Definition 1:** Given an LPN  $G = (PN, M_0, E, \lambda)$ , let  $\langle \tilde{P}N, \tilde{M}_0 \rangle$  with  $\tilde{P}N = (\tilde{P}, \tilde{T}, \tilde{Pre}, \tilde{Post})$  be its FP<sup>2</sup>N. The BFP<sup>2</sup>G of  $G$  is a deterministic finite-state automaton  $\mathcal{B} = (\tilde{\mathcal{M}}_B, \tilde{T}_{or}, \Delta, \tilde{M}_0)$  computed by using Algorithm 1, where  $\tilde{\mathcal{M}}_B \subseteq \tilde{\mathcal{M}}_B^2 \cup \tilde{\mathcal{M}}_{B_{ij}}^1$  for all  $i$  and  $j$  with  $(\tilde{M}_i, \tilde{B}_j) \in \tilde{\mathcal{M}}_{xd}^2$  is the set of states,  $\tilde{T}_{or} = \tilde{T}_o \times \mathbb{N}^{|\tilde{T}_u|}$  is the set of events,  $\Delta \subseteq \tilde{\mathcal{M}}_B \times \tilde{T}_{or} \times \tilde{\mathcal{M}}_B$  is the transition relation, and  $\tilde{M}_0$  is the initial state.

In Algorithm 1, the set  $\tilde{\mathcal{M}}_{new}$  is initialized at  $\{(\tilde{M}_0, \emptyset)\}$  in Step 2. For each pair  $(\tilde{M}, B) \in \tilde{\mathcal{M}}_{new}$ , if it is dangerous, we call function *BasisSonNodes* in Step 7 to compute

a basis son graph for the nonfailure subnet of the FPLN, which describes the normal behaviour of the FP<sup>2</sup>N from  $\tilde{M}$  by firing the transitions in  $\tilde{T}_o^1$  and the corresponding minimal explanations. Otherwise, Steps 11 to 25 compute each successor pair  $(\tilde{M}', B')$  by firing each transition in  $\tilde{T}_o^2$  and its minimal explanation restricted to  $\tilde{T}_u^2 \setminus \tilde{T}^{FP}$ , and compute the new arc from  $(\tilde{M}, B)$  to  $(\tilde{M}', B')$ . Then, Step 27 removes  $(\tilde{M}, B)$  from  $\tilde{\mathcal{M}}_{new}$  indicating that  $(\tilde{M}, B)$  has been considered. The procedure from Steps 3 to Step 28 is executed iteratively until  $\tilde{\mathcal{M}}_{new}$  is empty. Finally, by running Steps 29 to 32, the BFP<sup>2</sup>G is obtained by removing the second component from each pair  $(\tilde{M}, B) \in \tilde{\mathcal{M}}_x$ .
